## Keywords

love

Generates song using specified keywords and phrases

## Creativity

0.7

Should be between 0.1 and 1.0, the higher the value, the more creative/crazy the text.

## Repetition penalty ☒

Activate it to reduce repetitiveness in the results.

KW: love

You're my one true love, ooh  
You know you drive me crazy (drive me crazy)  
Drive me crazy, baby  
You know you make me so, so lazy

Drive me crazy, baby  
You know you make me so, so lazy  
Drive me crazy, baby  
Drive me crazy, baby (finally kiss me, baby)

I don't wanna be with nobody but you (no, no, no)  
I don't wanna be without your touch  
(Oh-oh-ohh)  
I don't wanna live without your love (fire or water)  
If there's nothing else in sight  
(Oh-oh-ohh)  
I don't wanna be with nobody but you (uh-huh)

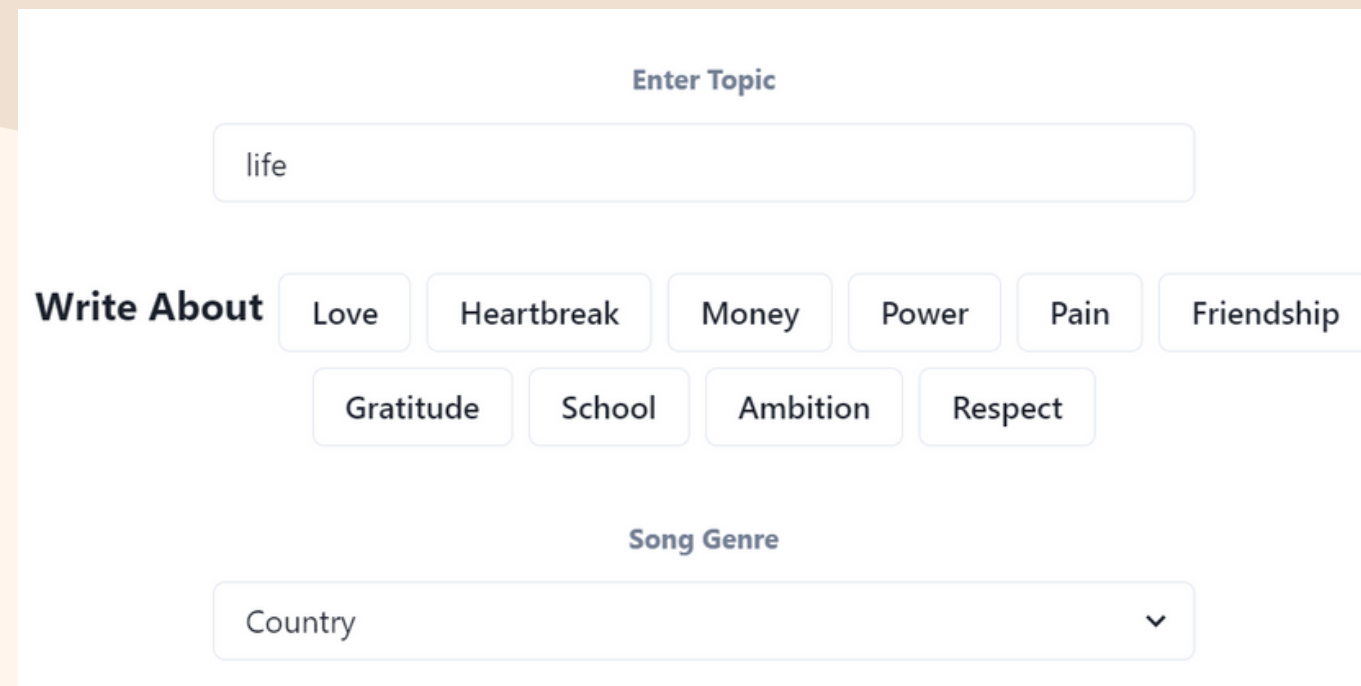

You're the sweetest thing on my mind  
And I want you to know  
Yes, I do and now  
When we have an argument  
We're not gonna leave this place  
I'm sure you will be my one desire  
(I don't wanna be)

Drive me crazy, baby  
You know you drive me

<https://www.freshbots.org/>

The screenshot shows the Freshbots website interface for songwriting. It features a text input field labeled "Enter Topic" with the word "life" entered. Below this is a "Write About" section with a grid of topic buttons: Love, Heartbreak, Money, Power, Pain, Friendship, Gratitude, School, Ambition, and Respect. At the bottom is a "Song Genre" section with a dropdown menu currently set to "Country".

Verse 1:

Life is a journey,  
An adventure to unfold,  
With every step and stumble,  
We learn to be bold.

Chorus:

Living life to the fullest,  
Chasing dreams that we hold,  
Taking chances, embracing changes,  
Our stories waiting to be told.

Genre Lagu yang tersedia: Country, Pop, Rap, Rock

# Methods

## Preprocessing dataset lirik lagu :

- Menghilangkan sample dengan nilai NaN
- Menghilangkan tanda-tanda kurung '(', '{', '['
- Menghilangkan lirik dengan panjang di atas 200 kata
- Menghilangkan lirik dengan bahasa selain inggris
- Membuat satu dataset untuk setiap genre lagu. Masing-masing dataset yang terbuat berisi lirik dari satu genre.

Come gather 'round people\nWherever you roam\n...	Folk
"There must be some way out of here," said the...	Folk

Dataset genre "Folk" hanya berisikan lirik lagu dari genre folk.

# Methods

## GPT-Neo 125m

GPT-Neo adalah sebuah model pre-trained yang dapat memahami dan menghasilkan teks bahasa manusia.

Dibandingkan dengan model pre-trained lain seperti GPT-2, GPT-Neo lebih ringan dan lebih mudah untuk digunakan atau dilakukan finetuning untuk memenuhi kebutuhan NLP yang lebih spesifik.

# Methods

Fine-tuning satu model GPT-Neo untuk setiap genre :

Masing-masing model pre-trained GPT-Neo dilatih kembali dengan menggunakan 2000 lirik lagu dari dataset genre yang digunakan.

```
import torch
from transformers import TrainingArguments, Trainer, GPTNeoForCausalLM, GPT2TokenizerFast
```

```
tokenizer = GPT2TokenizerFast.from_pretrained('EleutherAI/gpt-neo-125m', pad_token='<|pad|>')
model = GPTNeoForCausalLM.from_pretrained('EleutherAI/gpt-neo-125m')
model.resize_token_embeddings(len(tokenizer))
```

# Methods

Generator lirik lagu dari model-model yang telah dilakukan fine-tuning:

```
rock = GPTNeoForCausalLM.from_pretrained('/content/drive/MyDrive/NLP_Finetuning/Finetuned Models/Rock Lyrics Generator')
pop = GPTNeoForCausalLM.from_pretrained('/content/drive/MyDrive/NLP_Finetuning/Finetuned Models/Pop Lyrics Generator')
indie = GPTNeoForCausalLM.from_pretrained('/content/drive/MyDrive/NLP_Finetuning/Finetuned Models/Indie Lyrics Generator')
hip_hop = GPTNeoForCausalLM.from_pretrained('/content/drive/MyDrive/NLP_Finetuning/Finetuned Models/Hip Hop Lyrics Generator')
rap = GPTNeoForCausalLM.from_pretrained('/content/drive/MyDrive/NLP_Finetuning/Finetuned Models/Rap Lyrics Generator')
```

```
def generate_lyrics(genre, seed_text, number_of_lyrics):

    model = models.get(genre)

    model.to('cuda')

    generated = tokenizer(seed_text, return_tensors = 'pt').input_ids.cuda()

    output = model.generate(generated, do_sample=True, top_k = 10, max_length = 100, top_p = 0.95, temperature = 2., num_return_sequences = numb

    for i, sample_output in enumerate(output):
        text = tokenizer.decode(sample_output.tolist())
        regex_padding = re.sub('<|pad|>', '', text)
        regex_barra = re.sub('[|+]', '', regex_padding)
        space = re.sub('[ +]', ' ', regex_barra)
        result = re.sub('[\n](2, )', '\n', space)
        print("\n=== Generated lyric {}: \n\n{}".format(i+1, result))
```

# Result

```
generate_lyrics('Indie', 'In the deepest ocean', 3)
```

==== Generated lyric 1:

In the deepest ocean  
My deepest love  
Found in deepest love

I surrender everything  
That I have been  
I lay it all down  
At the edge of my heart

Every tear will be wiped away  
Every suffering will be wiped away  
All crown my name

deepest love  
Endless striving  
The deepest pain  
I cannot leave behind  
I will reach the ground  
deepest within

I surrender everything  
That I have been  
I lay it all down

==== Generated lyric 2:

In the deepest ocean  
You're not where I want to be  
I can't begin to know  
but I feel a beginning  
of some distant dream

Some in the crowd  
noticed on the promises  
other in the shadows  
You came to me  
and I felt Your love start  
and I felt Your touch

And I feel Your touch  
touch of warmth and friend  
And I feel Your touch  
touch of warm frailty  
And I feel Your touch  
touch of far

==== Generated lyric 3:

In the deepest ocean  
What remain  
What remain  
Still is here  
Here on the ocean

We will sing of this and this  
We will sing of this and this

And no more questions  
aling in us  
We will sing of this and this

Love comes again  
Just when we need  
Two souls come to walk  
One will come to know us  
The love he needs is more than this

Love comes again  
Just when we need  
INGS another world

# Result

```
generate_lyrics('Rap', 'This is our', 3)
```

==== Generated lyric 1:

This is our song  
And you can keep it jamin  
We gonna rock it up  
Till it runs off  
Its filled with emotion  
When your soul starts to rhyme  
Hold me back

When your soul starts to rhyme  
Hold me back

Im tired of rap realise  
Give me a call grab a mic  
And it will take it away  
Hit the bricks and youll be ready  
To get down the phone  
Cock back exposed  
Im on that

==== Generated lyric 2:

This is our December  
This is our time of the year  
This is our December  
This is why we live today  
This is our December  
This is why we live today  
This is our December  
This is why we live today

This is our December  
This is our time of the year  
This is our December  
This is why we live today  
This is our December  
This is why we live today  
This is our December  
This is why we live today

==== Generated lyric 3:

This is our year  
Im makin shots like never  
This is our year  
Im makin shots like never  
This is our year  
Im makin shots like never

This is my shit  
Im makin more shots than ever  
This is my shit  
Im makin more shots than ever

Eat that shit up pretzees  
You know that Im aESH  
That my beef homie showed no mercy  
I eat that shit up pretzees  
You know that

# Evaluation

Evaluasi model dilakukan dengan mengukur nilai perplexity dari kelima model yang telah dilatih (model genre rock, pop, indie, hip hop, dan rap).

Pengukuran perplexity dilakukan menggunakan metode *sliding-window strategy* ([ref.](#)).

# Evaluation

Model Generator Lirik	Nilai Perplexity
Rock	52.25
Pop	376.93
Indie	31.70
Hip Hop	9.73
Rap	7705.47

# Conclusion

- Kelima model memiliki nilai perplexity yang sangat bervariasi, yang mana kami yakini disebabkan oleh karakteristik genre yang berbeda-beda (Seperti halnya pop memiliki lebih banyak variasi tema lirik dibandingkan hip-hop)
- Dari penilaian subjektif, lirik lagu yang dihasilkan sudah cukup bagus untuk dapat memberi ide dan inspirasi dalam menulis lirik lagu
- Model mampu menghasilkan lirik yang berbeda antar genre yang berbeda.
- Performa model masih bisa ditingkatkan melalui pembersihan data yang lebih mendalam, dan penggunaan sistem dengan processing power yang lebih tinggi.
